# Introduction

- “Hidden Secret”
- Dates back thousands of years (~1900 BC)
- Two Main ideas: Encryption and Decryption
- Don’t need to understand the math and proofs for NCL
- Be familiar with basic cyphers
- Use problem solving skills with underlying cryptography concepts
- PRACTICE, PRACTICE, PRACTICE!

*A Replica of Thomas Jefferson’s cylinder Cipher in the National Cryptologic Museum*

# Cryptography in NCL

- XOR (Exclusive OR)
- Caesar Cipher / ROT
- Substitution Cipher
- Vigenere Cipher
- Hasing
- RSA (Rivest-Shamir-Adleman)

# XOR (Exclusive Or)

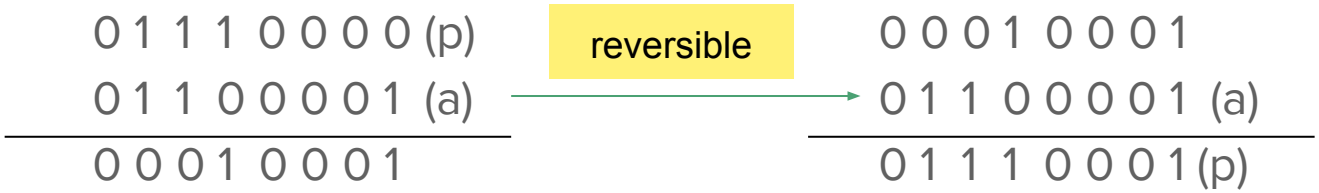
- Bitwise operation

| A | B | A ^ B |
|---|---|---|
| 0 | 0 | 0 |
| 0 | 1 | 1 |
| 1 | 0 | 1 |
| 1 | 1 | 0 |

# XOR (Exclusive Or)

Perform XOR between letters ‘p’ and ‘a’

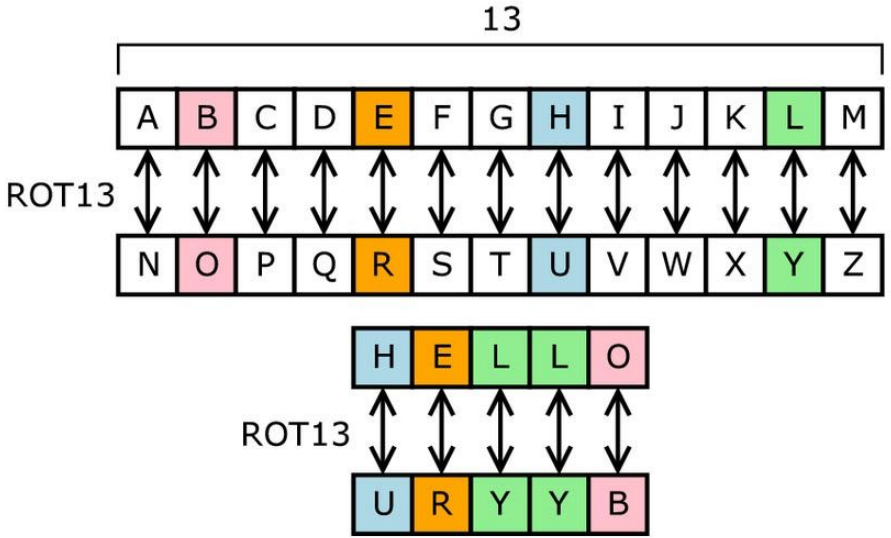
p = 0x70 = 01110000
a = 0x61 = 01100001



Can use used to quickly encrypt passwords using a secret character

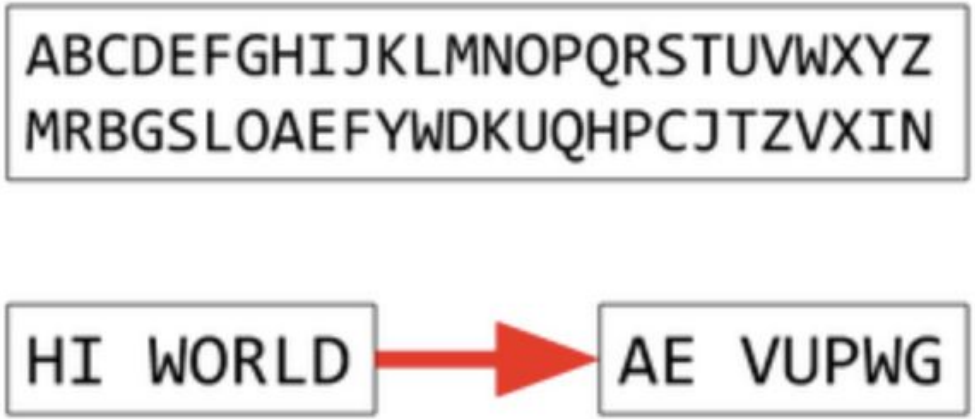
# Caesar Cipher / Rotation Cipher

- Letters are shifted given a shift value
- Common value is 13 (ROT13)



# Substitution Cipher

- Similar to Caesar Cipher, but the encryption **symbols** is chosen by the user



Doesn't have to be letters!

# Vigenere Cipher

- Extension of a Caesar Cipher
- Uses a “passphrase” to encrypt
- Same “passphrase is used to decrypt
- “IAMREALLYCOOL”
- Passphrase: “phill”

The following table can be used to encode a message:

| | A | B | C | D | E | F | G | H | I | J | K | L | M | N | O | P | Q | R | S | T | U | V | W | X | Y | Z |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| A | A | B | C | D | E | F | G | H | I | J | K | L | M | N | O | P | Q | R | S | T | U | V | W | X | Y | Z |

# Vigenere Cipher

- Pad with input with the passphrase

I A M R E A L L Y C O O L
P H I L L P H I L L P H I

- Use Vigenere table to encrypt

X H U C P P S T J N D V T

- Do same to decrypt

**Input**: “IAMREALLYCOOL”

**passphrase**: “phill”

The following table can be used to encode a message:

| | A | B | C | D | E | F | G | H | I | J | K | L | M | N | O | P | Q | R | S | T | U | V | W | X | Y | Z |

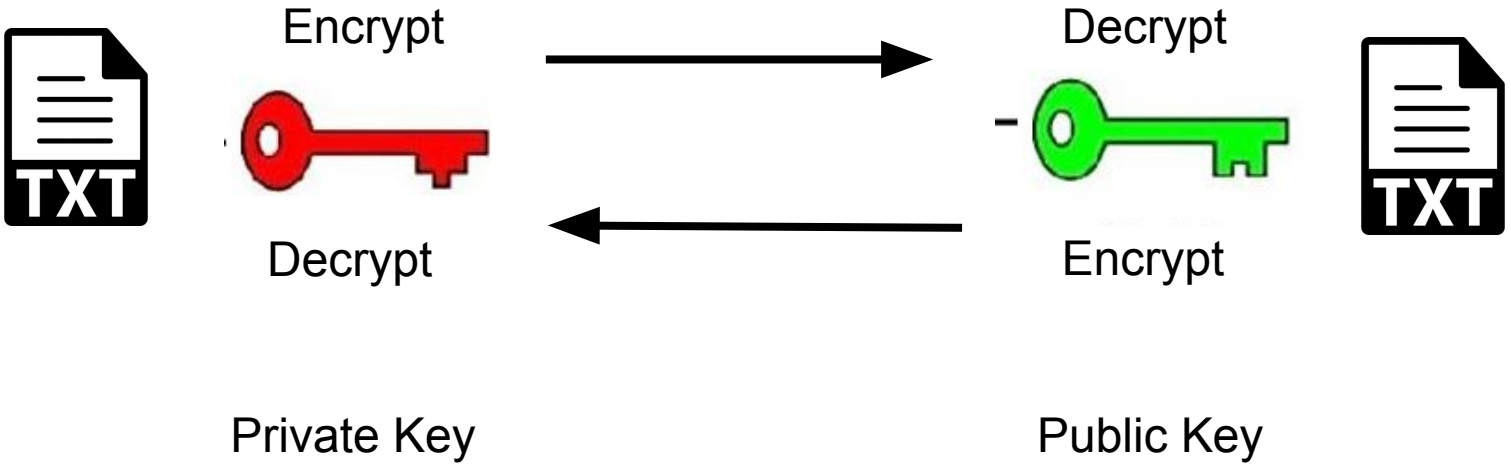
# Hashing

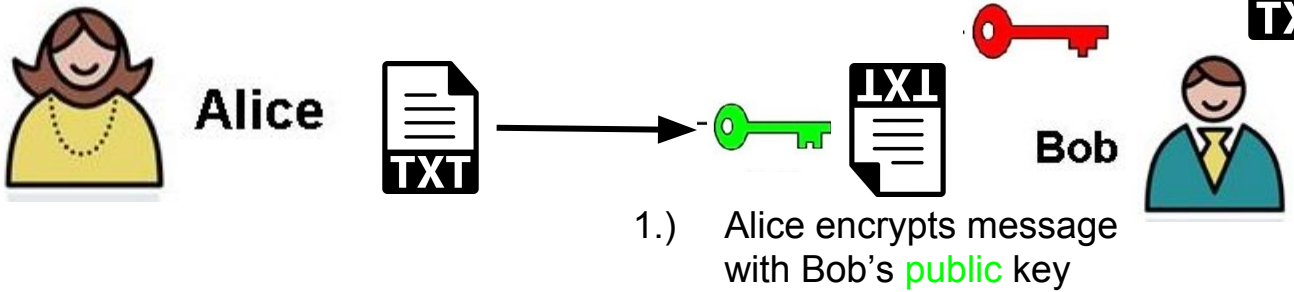
- One way encryption
- MD5, SHA256, SHA512, CRC...
- Think of a hash as a “fingerprint”
- Maybe given a hash and you have to find the input or you have to hash an input to reveal the flag

# RSA

- Asymmetric Key Encryption
- Public and Private Keys
- The keys can encrypt and decrypt each other!



# RSA

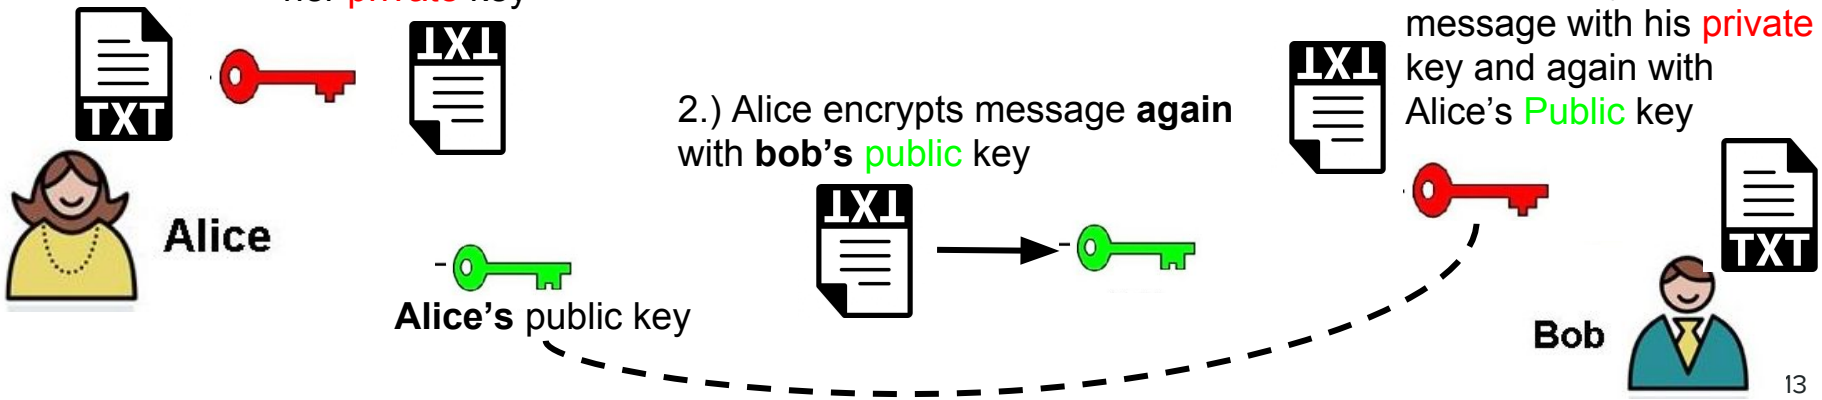


2.) Bob decrypts message with his private key

1.) Alice encrypts message with Bob's public key

How does bob know message came from Alice?

1.) Alice encrypts message with her private key



2.) Alice encrypts message **again** with **bob's** public key

2.) Bob decrypts message with his private key and again with Alice's Public key

# Tools

- Google
- Scripting Python or Bash
- Excel

# Example 1

“Jinger is not a very good spy and left this layer around: blorpy gwox{RgqssihYspOntqpxs}.....I wonder what it says”

flag{ }

# Example 1

flag{ CiphersAreAwesome}

# Example 2

“Beep beep beeeeep….”

..-. .-.. .- --. ... .- -- ..- . .-.. -- --- .-. ... . .. ... -.-. --- --- .-.. -... -.-- - .... . .-- .- -.-- .. .-.. .. -.- . -.-. .... . . ...

flag{ }

# Example 2

flag{SAMUELMORSEISCOOLBYTHEWAYILIKECHEES}

# Challenge

# Thank You
